

ITALDRAGHE Marine Constructions

Dredging and pumping solutions.

ITALDRAGHE SpA first started designing and building cutter suction dredgers back in the 1950s.

As Italy's leading dredger manufacturer, with over sixty years' experience, today it exports high quality dredging and pumping equipment, manufactured to IACS (International Association of Classification Societies) standards all over the world.

The ITALDRAGHE product range includes cutter suction dredgers, water jet dredgers, dredging pumps, booster stations, dredging heads for excavators, cutter heads, self-propelled workboats, rudder propellers, thrusters and three-way gate valves.

In addition to standard dredgers ITALDRAGHE also specialises in designing and building customised dredgers according to specific client requirements, providing efficient made-to-measure project solutions.

All ITALDRAGHE dredgers, from the smallest (150mm discharge diameter) to the largest (600mm discharge diameter) can be disassembled for shipment.
