

SCD series

Shore and Coast Defence

ITALDRAGHE SpA, Italian shipyard, manufactures and projects Cutter Suction Dredgers for shore and coast defence purposes.

ITALDRAGHE dredgers are able to pump from fine to coarse sand, silt, clay and gravel, with an impressive production rate of solids in the output slurry.

With more than 60 years of experience, with its equipment ITALDRAGHE SpA supports extractive operations all over the World with its dredging pumps - the key of success for ITALDRAGHE's Cutter Suction Dredgers (CSD) or Booster Stations.

The advantages of ITALDRAGHE dredgers are:

- high efficiency
- mounting high wear resistance pump
- long working life
- easy disassembly
- easy to transport
- limited maintenance
- immediate availability of spares
- single and double-walled versions
- able to work even in shallow conditions (up to min. 80 cm depth)
- option of self-propulsion
- option of being electrical power driven
- option of crew accommodation
- in case of clay pumping, option of cutter washing by water jet

APPLICATION EXAMPLES

Cutter Suction Dredger
for dams

Cutter Suction Dredger
for construction materials
